

Welcome to our Short Lessons on finding a Background Image for your website.

Lesson 1. Finding a Background Image for your Website.

A background image is generally a pattern as you only see it between the content areas, Google offers a large variety of free Background Images that are Royalty Free giving you permission to use them for your website.

Step 1. Run your Browser and go to the Google website.

Step 2. Perform a search eg. Free Background Images for Website Purple or Free Background Images for Website Hearts

Step 3. Switch to the Image Search. (*Click on the Images Option*)

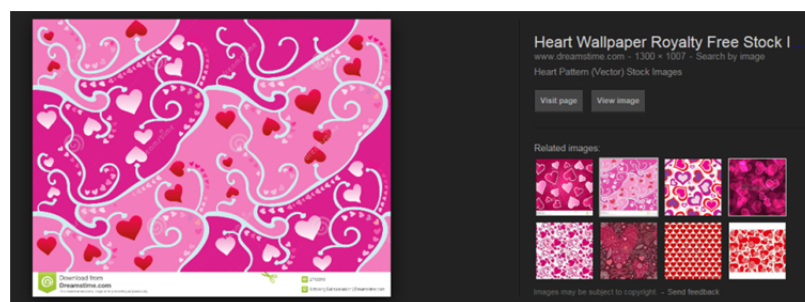

As you point to each image you will see a size eg. 1200x560, it is wise to select a pattern that will match neatly together once you place a few of them side by side. It is difficult to place one large image as the background because you will lose the clarity of the image.

Step 4. Find an Image that you like then Save the image into your folder.

SAVE PICTURE

- Right-click** on the Image
- * A menu will appear relating to the image
- Click on **Save Picture As**
- Select your **Folder**
- Click on the **Save** button

From here it is wise to complete the next lesson: Create a Header / Banner / Logo / Image

Congratulations! You have just obtained a background image (jpg file) for your website.
